

Elderly transfer sheet h8934

H8934 nylon patient transfer sheet, 100x200 cm. 250 kg capacity and integrated handles for safe and professional assisted handling.

The **H8934 patient transfer sheet** is a professional device designed for the **safe and assisted handling** of people with reduced mobility or who are bedridden. The use of high-resistance nylon allows for minimizing friction during movement, effectively solving the problem of excessive physical load on healthcare personnel and preventing musculoskeletal injuries.

The system is optimized to facilitate supine positioning from stretcher to bed and for the ergonomic repositioning of the patient. Thanks to its technical structure, it can be used individually or in a double configuration to facilitate the insertion of lifting belts, ensuring a smooth transition free of trauma for the patient.

Technical features

- **Dimensions:** 100 x 200 cm
- **Maximum capacity:** 250 kg (suitable for bariatric patients)
- **Material:** High-slip technical nylon
- **Grip system:** Integrated reinforced pulling handles
- **Maintenance:** Washable and reusable for intensive cycles
- **Compatibility:** Standard hospital beds, electric beds, and stretchers
