

Electric pass-through window h1013_05

Single pass-through window in AISI 304 stainless steel, with electric opening. Dimensions: W 90 x D 13 x H 140 cm.

The **H1013_05 electric hospital pass-through** is a **single pass-through window**, designed to facilitate the safe passage of instruments and materials between separate rooms in healthcare settings such as **operating rooms and preparation areas**.

It is **made entirely of AISI 304 stainless steel**, a material chosen for its **high resistance to corrosion, long durability and ease of sanitization**, fundamental characteristics for sterile environments subject to frequent cleaning. The window is equipped with **4+4 transparent safety glass**. If the glass breaks upon impact, the plastic sheet inserted inside holds the glass fragments.

This model is equipped with **electric opening**, an ideal solution to ensure **maximum practicality and hygiene**, avoiding any manual contact during use. The electric system makes the opening smooth, precise, and suitable for contexts where speed and operational safety are priorities.

The **dimensions are 900 x 130 x 1400 mm (W x D x H)**, ideal for adapting to technical walls and partitions in hospital departments. The handle is made of **grey polyamide**, 20 mm diameter and 250 mm center distance.
