

Emergency air rescue backpack h687_100

Air rescue emergency backpack h687_100 XL (40x52x24 cm) in high-visibility red. Smooth rectangular design, without velcro/magnets, 49.92 L.

The **h687_100 Emergency air rescue backpack** is a professional device specifically developed for air rescue operations, made in XL size and in a bright high-visibility red color. Designed for the needs of rescuers and intervention teams, this backpack solves the operational criticality of strict aviation regulations, which prohibit the use of velcro and magnets in onboard equipment to avoid interference or hygiene issues. The customizable internal layout is in fact achieved through transparent modular pouches, specifically designed for this version and held by two removable retention flaps. The smooth and rectangular design ensures easy cleaning, while the corners are reinforced and rounded to resist wear and allow rapid maneuvers in the most complex emergency contexts. The equipment includes a metal hook for the winch carabiner and 2 circumferential zippers that allow modular opening of the backpack, including book-style mode. The entire module is optimized for efficiency and durability, prepared for use as a dedicated bipack system for circulation and respiration.

Technical features

- **Product type:** emergency air rescue backpack
- **Size:** XL
- **Dimensions:** 40 × 52 × 24 cm
- **Capacity:** 49.92 L
- **Weight without accessories:** 3.36 kg
