

Emergency spill kit with container h1045_04

Emergency spill kit for hydrocarbons and derivatives (water-repellent), complete with a 600x400x320h mm protective sliding-lid chest. Selective absorbent capacity for oils, ideal for land and water.

The **emergency spill kit with container** (model h1045_04) is an integrated and specific professional system for the management, containment, and rapid remediation of accidental leaks of hydrocarbons and their derivatives. Developed for **industrial plants, workshops, logistics warehouses, construction sites, and maintenance departments**, this equipment is aimed at safety managers who need to operate in compliance with current environmental regulations (Legislative Decree 152 of 03.04.06 and subsequent amendments with Legislative Decree 4 of 16.01.08), as well as ISO 14000, ADR, and Ministerial Decree 20/2011 procedures for managing potentially polluting liquid substances. The system solves the operational problem of the **timely confinement of oils in outdoor environments, even in the rain, or directly on water surfaces**. All internal materials are water-repellent (absorbing hydrocarbons but not water) and comply with European regulations, stored inside a practical protective chest with a sliding lid for immediate transport to the point of emergency.

Technical features

- **Intended use:** selective absorption of hydrocarbons and derivatives in outdoor environments, water surfaces, or near water-based processes
- **Chemical-physical properties of absorbents:** oleophilic and hydrophobic materials (retaining oils but not water)
- **Geometric dimensions of the container (LxPxH):** 60 x 40 x 32 cm (600 x 400 x 320 mm)
- **Type of external container:** protective chest with sliding lid
- **Construction features of the sheets:** pre-cut transversally and longitudinally to optimize use; made of three layers ultrasonically welded to prevent fiber loss
- **Function of the socks:** flexible cylindrical barriers designed to easily circumscribe the spill, containing and absorbing liquids simultaneously
- **Function of the pillows:** high-capacity absorbent elements for tight spaces, positionable under taps, pipes, or machinery as a preventive base for transfers
- **Environmental compliance regulations:** Legislative Decree 152 of 03.04.06 and s.m.i. with Legislative Decree 4 of 16.01.08, ISO 14000, ADR, Ministerial Decree 20/2011 and European standards for absorbent materials

Detailed kit composition

- **External container:** 1 chest with sliding lid (measures 60x40x32 cm)
- **Absorbent sheets:** 30 sheets
- **Absorbent socks (barriers):** 6 first-size socks and 6 second-size socks (total 12 socks)
- **Personal Protective Equipment (P.P.E.):** 1 pair of gloves and 1 protective mask
- **Waste management accessories:** 3 bags for the disposal of exhausted materials
