

## Expired medicine container 105lt - h32623

Expired medicine collection container with anti-intrusion lid and metal base for ground fixing. Capacity 105lt.

The medicine collection container is very **impact and weather resistant** because it is made of polyethylene using the rotational molding technique.

Medicines are easily inserted through an **anti-intrusion hatch**, measuring approx. 19x19 H.20 cm, located on the lid.

The container **can be fixed to the ground** using a metal base with 2 side holes.

It can be emptied using a bag or via an extractable internal container, also made of plastic.

It has a suitable thickness to ensure total safety for the operator during the emptying process, especially in case syringes are inadvertently inserted, as the structure prevents needles from coming out.

### FEATURES AND MINIMUM MEASUREMENTS

- container capacity approx. 105 lt
- height from the ground approx. 98 cm
- lid dimensions approx. 48 cm
- anti-intrusion lid dimensions approx. 19x19 H.20 cm
- max depth approx. 56 cm
- metal base dimensions approx. 49x45 cm
- metal base weight approx. 5 kg
- total weight approx. 14 kg

### INFORMATION

- **Capacity** 105 lt
- **Height in millimeters** 980.000000
- **Width in millimeters** 490.000000
- **Depth in millimeters** 560.000000
