

## Fire hydrant cabinet h702\_06

Recessed fire cabinet in steel and aluminum, 37x18x61 cm. Discrete and resistant solution for the protection of safety equipment in offices and apartment buildings.

The **fire hydrant cabinet** is a technical solution designed for the safe housing of safety equipment in indoor environments. Thanks to the **recessed mounting** configuration, the device allows for space optimization, reducing volumetric bulk along corridors and escape routes. The structure combines the robustness of **painted sheet steel** with an aluminum perimeter frame, ensuring effective protection against impacts and dust.

## Technical features

- **Dimensions:** W37 x D18 x H61 cm
- **Body material:** Sheet steel with protective coating
- **Frame material:** High-resistance aluminum
- **Color:** Technical gray
- **Installation:** Designed for wall recessing
