

First aid bag h648_56

Professional first aid backpack in red water-repellent material, 63x35x25 cm. Modular three-section design for rapid emergency interventions.

This **first aid bag** with a lightweight and robust design has been specifically designed for intensive use in **emergency services**. The versatile structure allows three different transport modes: as a backpack on the back, with a shoulder strap, or via the practical wrist strap, adapting to different operational needs in the field. Operator safety is guaranteed by the presence of high-visibility **reflectors**, essential for interventions in low-light conditions.

The internal organization is optimized for maximum efficiency: the large main compartment opens almost completely to facilitate access, while the **zippered partition walls** allow the space to be divided into three distinct sections. Additional front and side compartments, together with the mesh pockets in the lid, ensure an orderly cataloging of small accessories and consumables.

Technical features

- **Type:** Professional emergency backpack
- **Dimensions:** approx. W. 63 x D. 35 x H. 25 cm
- **Main compartment volume:** approx. 35 liters
- **Material:** High-resistance red water-repellent exterior
