

Foam corner protection for columns h972_45

Adhesive corner bumper in black-yellow NBR foam, to protect edges and columns. Dimensions: L 730 x D 300 x h 25 mm.

The **foam corner protection for columns h972_45** is the ideal solution for marking and protecting sharp edges, dangerous corners and exposed structures in industrial environments, warehouses, workshops and high-traffic work areas.

Made of **NBR foam**, a lightweight and impact-resistant material, this protection acts as a visual and physical barrier against accidental impacts, reducing the risk of damage to people and property.

The **black/yellow** contrast design ensures **high visibility**, while the **150 x 2 mm** opening allows it to be easily adapted to the edges of columns, shelving or structures.

The product complies with **REACH** regulations, guaranteeing the absence of hazardous substances, and is available in different sizes and colors to suit every safety requirement.

Installation is quick and easy thanks to the integrated **adhesive system** which allows it to be applied without the use of tools or accessories.

Perfect for preventing accidental impacts and improving safety in any work environment.

Technical features:

- **Material:** NBR Foam
- **Color:** Black/Yellow
- **Length:** 730 mm
- **Width:** 300 mm
- **Thickness:** 25 mm
- **Opening dimensions:** 150 x 2 mm
- **Weight:** 0.30 kg
- **Compliance:** REACH
- **Mounting:** Integrated adhesive
- **Application:** Indoor and covered outdoor areas

User benefits:

- **High visibility:** thanks to black/yellow safety colors.
- **Risk reduction:** of impacts and damage to structures and people.
- **Installation:** quick without tools.
- **Material:** lightweight yet impact-resistant.
- **Complies with regulation:** REACH for material safety

FAQ:

1. **On which surfaces can it be installed?**
It can be applied to any corner or edge, such as columns, shelves or walls.
2. **Is it weather resistant?**
It is recommended for indoor or covered outdoor environments.
3. **How is it installed?**
Thanks to the integrated adhesive, it is easily applied without the use of tools.
4. **How to remove the protection once installed?**
The protection can be removed manually; any adhesive residue can be easily removed with specific products for industrial surfaces.
5. **What material is used?**
It is made of NBR foam compliant with the REACH regulation.

Short buying guide:

When choosing **corner protection for industrial** or work environments, you must consider several fundamental aspects. The material must be flexible yet resistant to effectively absorb impacts. Visibility is equally important: a color combination like black and yellow clearly signals danger areas. Installation must be quick and easy, preferably via adhesive, to reduce assembly time and costs. Finally, **compliance with safety regulations such as REACH guarantees the product's suitability for professional use and safety for operators.** The h972_45 model is designed to meet all these needs, making it ideal for warehouses, workshops, loading areas and all environments where it is necessary to protect columns and corners in a safe, visible and durable way.

Foam corner protection, black yellow corner bumper, industrial edge protection, adhesive column protection, NBR foam REACH, corner protection for warehouses, workplace safety.
