

Footwear drying machine h1034_04

Professional wall-mounted shoe dryer for 20 pairs in stainless steel. Dimensions: W 116 x D 48 x H 200 cm.

The **footwear drying machine H1034_04** is a **professional shoe drying panel** suitable for the simultaneous drying of **up to 20 pairs of boots or shoes**, perfect for **hotels in mountain areas, ski centers, alpine huts, barracks, fire departments** and all facilities that manage wet or damp footwear in cold climate environments.

Made **entirely of stainless steel**, it guarantees **maximum hygiene, corrosion resistance, ease of cleaning** and a **long durability**, even in difficult climatic conditions.

The system connects to any **hot water heating system** via **1/2" connections** (requires plumbing intervention), without the need for electricity. Optimal operation is guaranteed by a constant flow temperature between **35°C and 40°C**.

The **continuously bent rounded brackets** are designed to ensure **continuous circulation of hot water**, without interruption points. This guarantees **deep, effective and uniform** drying right to the tip of the shoe. Furthermore, the shape of the brackets prevents any lateral or downward tilting, keeping the footwear in a stable and safe position.

It can also be used for **children's shoes** and **gloves**, making it extremely versatile. The absence of electrical components and the simplicity of construction make this shoe dryer **totally maintenance-free** and covered by a **5-year warranty**.

Purchase the **model H1034_04** now: the definitive solution for the ecological and professional drying of boots! Request a personalized quote now for multiple supplies or custom-made solutions for your facility.

Technical features:

- **Structure:** full stainless steel
- **Capacity:** 20 pairs of boots or shoes
- **Use:** also suitable for gloves and children's shoes
- **Dimensions:** W 116 x D 48 x H 200 cm
- **Power supply:** connection to hot water system (requires plumbing intervention)
- **Connections:** standard 1/2"
- **Recommended flow temperature:** 35–40°C
- **Mounting:** wall-mounted

Benefits for the user:

- **Drying:** uniform for large volumes of shoes or boots.
- **Ideal:** for cold environments and high-rotation facilities.
- **Operation:** ecological without electricity.
- **Compatible:** with gloves and small footwear.
- **No:** maintenance, savings on management costs.

FAQ:

1. **Is the panel suitable for bulky ski boots?**

Yes, the structure is designed to dry even voluminous boots in a stable and effective way.

2. **Can it be installed inside locker rooms or ski storage areas?**

Certainly. The model H1034_04 is designed for indoor environments such as locker rooms, ski rooms and service warehouses.

3. **Does it require electrical power?**

No, operation is through a hot water heating system, without the need for electricity.

4. **How long does it take to dry shoes?**

The time depends on the degree of humidity, but the system's efficiency ensures rapid and constant drying without intermediate cooling.

5. **Is it difficult to install?**

No, thanks to the standard 1/2" connections and wall mounting, installation is quick and intuitive for specialized technical personnel.

Mini buying guide:

Choosing a professional shoe dryer like the H1034_04 model means investing in **operational efficiency, hygiene and comfort for users**. For facilities with a high flow of wet shoes – such as hotels, barracks or sports centers – it is essential to opt for **stainless steel** models with **low energy impact** and **no maintenance**. Furthermore, the hot water system allows the use of existing systems, reducing costs and improving efficiency. With a capacity of 20 pairs, this model represents the **top of the range** for performance and versatility.

Professional shoe dryer 20 pairs, stainless steel boot dryer for hotels, shoe dryer for alpine huts, stainless steel boot drying machine, hot water shoe drying panel, shoe dryer for barracks and ski centers, ecological wall-mounted stainless steel shoe dryer.
