Galvanized steel pallet 7 slats h1037_07

Galvanized steel pallet 1000x1200 mm with 7 slats. Lightweight riveted structure, fireproof and recyclable for safe industrial storage and logistics.

The **h1037_07 galvanized steel pallet** represents an advanced engineering solution for handling and storage in industrial environments. Designed to overcome the limitations of traditional supports, it combines a **reduced thickness** structure with high mechanical resistance, ensuring a low weight of only 20.3 kg which facilitates manual handling and optimizes load capacity during transport.

The full galvanized steel construction makes it immune to climate changes and humidity, eliminating the risks of biological degradation or oxidation typical of wood or untreated metals. The total absence of welds, replaced by a **rivet fastening system**, gives the structure operational flexibility and superior robustness against dynamic stresses.

Technical features

- **Material:** high-resistance galvanized steel
- **Dimensions:** 1200 x 1000 mm
- **Configuration:** 7 support slats
- **Self-weight:** 20.3 kg
- **Profile thickness:** reduced for weight optimization
- **Corrosion resistance:** high, via galvanized coating
- **Weather resistance:** suitable for outdoor exposure and thermal shocks
- **Fire safety:** fireproof material (does not contribute to the fire load)
- **Sustainability:** 100% recyclable at the end of its life cycle
- **Assembly method:** mechanical fastening via rivets (no welds)
- **Maintenance:** washable and moisture-resistant surface
- **Certifications:** compliant with energy efficiency and total recyclability standards
