Galvanized steel pallet with 5 slats h1037_02

h1037_02 galvanized steel pallet, 800x600 mm, 11 kg. 5-slat structure without welds, fireproof and recyclable for intensive industrial logistics.

The **h1037_02 galvanized steel pallet** represents a technical evolution compared to traditional handling systems, combining **structural strength** and **operational lightness**. Designed for industrial and commercial contexts, it stands out for a **reduced thickness** structure obtained through a **patented profiling process** that eliminates the need for solid material, reducing the tare weight to just **11 kg** without compromising load capacity. The use of galvanized steel ensures total protection against **corrosion** and **rust**, making the support suitable for prolonged life cycles and making it totally **regenerable** and **100% recyclable**.

Technical features

- **Material:** high-strength galvanized steel
- **Dimensions:** 800 x 600 mm
- **Number of slats:** 5
- **Weight:** 11 kg
- **Profile thickness:** reduced for weight optimization
- **Fixing:** rivet system (total absence of welds)
- **Thermal properties:** inert to temperature changes
- **Fire safety:** 100% fireproof material
- **Maintenance:** washable surface and moisture resistant
- **Sustainability:** complies with energy efficiency standards, reduces CO2 emissions
- **International circulation:** exempt from fumigation requirements
