

Professional coffee machine with separate lights h13245

Espresso machine made of stainless steel with copper boiler. Produced entirely in Italy. Professional coffee at home in a compact size.

Coffee with a unique design with a compact size that encompasses the best of existing technology in the world of espresso coffee. The E61 group, created in 1961, is still a technology solution never exceeded in the field of professional coffee machines.

The reasons for its success is due to its appeal aesthetic, as well as by the process of extraction of the coffee. Proper extraction equilibrium was established between the quantity of mixture, degree of grinding and tamping the coffee in the filter holder and water temperature. The indicator displays on the machines if the extraction pressure is correct. Low pressure results in a coffee with a little cream and tasteless (in mining); if the pressure is too high, the coffee will come down hard and the taste will be too bitter (coffee extract supra). You can adjust the 4M (Grind, Blend, Hand, Machine) as a real barista!

Inside the machine has a heat exchanger, a special technology that allows to heat milk and coffee at the same time, and consequently, to prepare many more cappuccinos one behind the other. In addition, in a heat exchanger, the water temperature is always within a few degrees below the boiling point, so that the steam is always and immediately available. This makes it much easier to get that full-bodied and dense foam to use for your unique cappuccinos.

- Copper boiler 1.5 L with heat exchanger system and thermosiphon dual cycle to obtain the boiler and the group always hot, at the right temperature.
- Inner tubes in copper.
- Double gauge to check the pressure in the two boilers.
- On / off switch in stainless steel.
- Lights separate
- Checking the water level in the tank and automatic interruption of the boiler resistance to lack of water.

- Safety thermostat with manual reset.
- Adjustable overpressure valve.
- Tube steam wand and hot water technology professional with anti-sunburn.
- Commercial LELIT 58mm filter holder to the use of ground coffee.
- Polished stainless steel body, an attractive, hygienic and durable.

Includes:

- 1 cup holder
- 2 cups filter holder
- blind filter
- tamper in steel with red handle in wood

Technical data:

Pumps: 48W / 15 bar Fuel tank capacity: 2.5 liters Power: 1400W Product Weight: 18.8 kg Operation: Coffee Product made in Italy

INFORMATION

- **Height** 35,5 cm
- **Width** 22,5 cm
- **Depth** 52 cm
- **Material** Stainless steel
- **Typology** 1 gruppo
- **Power** 1400 W
- **functioning** Ground Coffee
