

Bicycle Rack with rain protection h14056

Bike carrier rack 14 places sided with rain cover and metal carbonate. Made in Italy

Bike carrier rack 14 places sided with rain cover and metal carbonate. Made in Italy

From the imposing structure rastrellieresi enhanced with a metal cover and polycarbonate for repairing bicycles from the rain. The two vertical structures and upper arches give life to what will be precisely the shelter, made of tubular galvanized steel, which in turn made of polycarbonate opaque type, you will be supported by two horizontal beams of rectangular pipe galvanized.

The shelter has been designed and fitted with a gutter, in the rear and front, for the collection and discharge of stormwater. Not least is the structure that makes the bike racks, two horizontal cross connection of tubular galvanized steel, from what is the first part of this article. The brackets firm-bike made of tubular galvanized steel, offer the possibility of parking on both sides per a total of fourteen bicycles. The stability of this impressive item of street furniture is given from the plates, placed at the base of each structure.

The bike rack is in fact an excellent location in outdoor environments such as train stations or offices residential, where the influx of commuters seems to be much greater than the historical centers.
