

Wall lamp with steel reflector h16811

Wall lamp in wrought iron with steel reflector, double glazing Black / White

Wall lamp in wrought iron treated in the galvanizing bath, with steel reflector, double glazing black / white.

Galvanizing is the process by which it is applied a zinc coating on a metal artifact generally of steel to protect it from galvanic corrosion: it in fact limits the formation of micro electrolytic cells to anodic action in the grain boundaries. Zinc is less electronegative (ie less noble) of the steel, and then, in case of breakages or porosity of the protective film, itself becomes the sacrificial anode in the electrolytic corrosion and is consumed if there is closure of the field lines.

The reflector is pointed at an angle, double glazing has a black / white.

Product made in Italy.

Specifications:

Voltage 230 V 50 Hz Type E27 26 27mm Degree of protection IP20 class 1 Dimensions 25cm x 56cm x 25cm

INFORMATION

- **Height** 25 cm
- **Width** 56 cm
- **Depth** 25 cm
- **Material** wrought iron
- **Typology** wall
