

Winter cover for inground pools in polyester 6m diameter h17424

Winter cover for inground pools in polyester 6m diameter. Product made in Italy

Winter cover for inground pools of circular shape with dimensions up to 6 meters made of polyester.

Polyester is a material characterized by high resistance to abrasion, creases and heat and good resistance to chemical and physical agents. The polyester fabrics, due to the low absorption coefficient of the liquid, do not absorb moisture which makes them waterproof and resistant to dirt.

The winter covers allow to keep the water for long. Being resistant to weathering and the effect of ultraviolet rays keeps the water in such a manner that it can be reused in the next season.

Our winter covers are made of special materials, treated against frost and UV rays. The winter covers are accompanied by pockets of weighting necessary to maintain coverage .

Specifications:

- polyester material
- for circular in-ground pools
- used for swimming pools with maximum dimensions of 6.00 m in diameter
- Italian production
- winter cover
- with pockets of heavier
