

Ham salting and curing pallet h509_63

3-level ham curing pallet, galvanized steel, h.203 cm, adjustable and demountable, load capacity 300 kg.

The ham curing pallet is a specialized structure for the preservation and treatment of meat products during the curing phase. Designed specifically for **ham factories, slaughterhouses, and meat processing industries**, it solves the need to organize vertical space while maintaining the product in controlled and accessible conditions.

The robust **galvanized steel** structure ensures resistance to corrosion, a critical element in humid curing environments. The **3 adjustable levels** configuration allows the height to be adapted according to the type and size of the product, while the **variable placement of the bars** offers flexibility in positioning hams to optimize air circulation and curing uniformity.

Technical characteristics

- Dimensions: W.115.3 × D.95.3 × h.203.3 cm
- Weight: 46 kg
- Material: galvanized steel
- Structure: 3 levels
- 1st and 3rd level: 4 bars each
- 2nd level: 3 bars
- Level height: adjustable
- Bar positioning: variable per level
- Maximum capacity: 300 kg uniformly distributed across all levels
- Demountable and easy to transport
