

Heating jacket for 25-liter drums h923_17

Professional heating jacket h923_17 for 25-liter drums. 130 W power, integrated adjustable thermostat, and silicone-coated fiberglass fabric lining.

The **heating jacket for 25-liter drums h923_17** is an encompassing industrial heating system developed specifically for **chemical plant operators, employers, logistics and production managers, laboratory technicians, and workshop managers**. This device responds to the operational need to maintain fluids and stored products at a constant temperature during winter, preventing them from falling below certain critical temperatures. The system solves the operational problem of **preserving the thermal properties of materials inside containers, allowing the setting and maintenance of the ideal temperature required by the user thanks to a radiant core and a heating element fixed to an internal insulating layer**. Entirely manufactured in Italy, the jacket features an outer coating coupled with a glass-silicone layer ideal for adhering perfectly to the drum and resisting high temperatures. The electrical parameters, specific protective materials, and exact volumetric dimensional tolerances of the device are indicated in detail in the technical data sheet of the file image_3dde67.png.

Technical specifications

- **Product type:** heating jacket for 25-liter drums
- **Code reference:** h923_17
- **Nominal power supply:** 230 V AC
- **Power consumption:** 130 Watt
- **Thermostat configuration:** built-in and adjustable from 0 to 150°C (the operating range varies from 0 to 90°C depending on the characteristics of the container and the material contained)
- **Outer lining material:** Cordura / Nylon (synthetic material, resistant and durable in the most extreme conditions)
- **Internal insulation material:** insulating layer in fiberglass fabric to which the heating element is fixed
- **Closure and contact layer:** fiberglass fabric coated in silicone rubber (glass-silicone), ideal for adhering to the drum and resisting high temperatures
- **Structural dimensions:** height (H) 400 mm x circumference 1200 mm
- **International Protection rating (IP):** IP 40
- **Power cable specifications:** 3-conductor silicone cable without plug, length equal to 3 meters
- **Top lid configuration:** NO (not included)
- **Manufacturing and origin:** all processing is carried out in Italy
