

Hermetic cast iron road manhole cover h638_77

Spheroidal cast iron manhole cover class C250 with automatic locking. Dimensions: L.550xW.550x H45 mm

Road manhole cover suitable for installation along roadsides according to the **load class compliant with C250 standard** for cars and buses with resistance corresponding to $> 250\text{kN}$. The manhole cover is made entirely of **spheroidal cast iron** according to the latest current standard **UNI EN 124** and has a **square-shaped frame** as a support base with a square-shaped lid on top. The frame is made with **shaped and beveled corners** to ensure better **support and anchoring** to the base and further safety also given by the **strategic "U" shape** which offers an additional advantage of **hermetic protection** against odors by filling with appropriately chosen materials such as sand. The lid locking system, which can be released via a generic lever and a closed-bottom eyelet for opening with a lifting key, ensures greater security against any unauthorized opening.

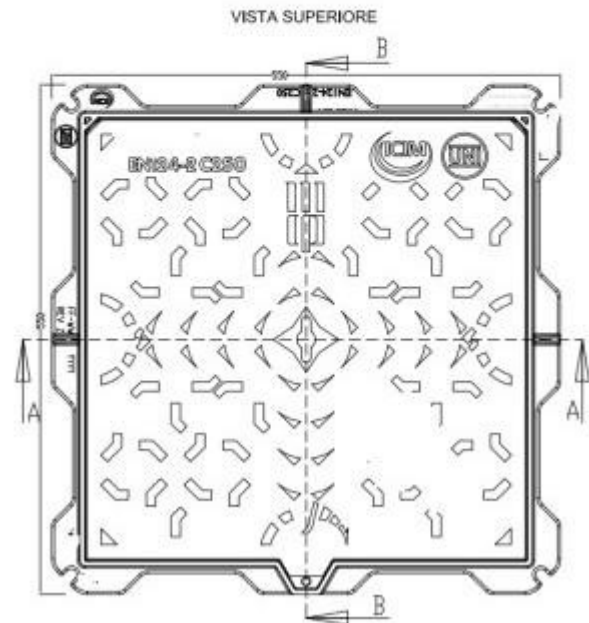

Technical Features:

- Material: spheroidal cast iron
- Dimensions: L.550xW.550x H45 mm
- Load class C250 - cars, buses
- Suitable for roadsides, gullies and gratings
- Hermetic and with automatic locking
- Internal "U" shaped seat for odor-tight system
- Equipped with identification markings and water flow channels according to standard
- Clear opening: 450x450
- Weight: 23.2 Kg
