

Hospital clog rack shelf h640_28

Wall-mounted stainless steel clog rack shelf, 99.5x218 cm. Capacity 32 pairs, specific for filter zones and entrances to operating rooms and sterile areas.

The wall-mounted clog rack shelf **h640_28** is designed for the systematic organization of technical footwear in healthcare and

hospital environments. Strategically placed in filter zones and at the entrances of surgical blocks, this structure allows medical staff to manage footwear changes in compliance with hygiene protocols, ensuring that shoes for sterile environments are always orderly and separated from common areas.

The entire **stainless steel** construction meets rigorous decontamination requirements, offering a non-porous surface resistant to frequent cleaning cycles with aggressive chemical agents. The vertical wall design optimizes available space, eliminating ground clutter and facilitating floor sanitization operations.

Technical features

- **External dimensions:** L.99.5 x D.13 x h.218 cm
- **Material:** AISI stainless steel specific for hospital use
- **Storage capacity:** 32 pairs of clogs
- **Fastening system:** Designed for wall anchoring
- **Structure:** High-resistance multi-element rack
