

Hotel safe with electronic lock h3473

Compact electronic safe (W 31 cm) for hotels and B&B. Code lock with master/user password, internal LED light and anthracite finish.

The **electronic hotel safe** is a compact and reliable security solution, specifically designed for the needs of hotels, bed & breakfasts and holiday homes. Thanks to its **compact dimensions** (only 31 cm wide), this model solves the operational problem of installation in tight spaces, such as small wardrobe compartments or desk shelves, while ensuring effective protection for guests' valuables (wallets, jewelry, documents or keys).

The device is equipped with a **dual password management system (Master and User)**, which allows the facility management to intervene in case the guest loses the code. A distinctive feature is the **internal LED light**, which activates when the door is opened, facilitating the visibility of the contents even in low light conditions (inside wardrobes or dark niches). The anthracite color finish ensures a sober and modern aesthetic, easily integrated into any type of room furniture.
