

Indoor AED cabinet h667_03

Painted metal cabinet for AED, dimensions W38×D20×H38 cm, available in white/green, for office and public space installation.

The **AED (Automated External Defibrillator)** cabinet is a containment and protection solution designed for professional and public environments such as offices, shopping centers, and sports facilities. Its primary function is to ensure maximum visibility and immediate accessibility of the defibrillator in the event of a cardiac emergency, reducing critical intervention times.

Made with a robust **powder-coated steel** structure, it ensures long-term durability and resistance to the mechanical stresses typical of high-traffic environments. The powder finish guarantees anti-corrosion protection and ease of cleaning.

Technical features

- **Dimensions:** Width 38 cm × Depth 20 cm × Height 38 cm
- **Material:** Powder-coated steel
- **Available finishes:** White or Green
