

Industrial electric heater h932_02

30kW three-phase stainless steel electric heater, ideal for workshops and construction sites. 400 m² coverage, wheeled with IPX4 protection.

This **professional electric heater** is designed to ensure a constant and safe heat supply in large industrial environments. Thanks to its robust structure with a fully metal casing and **stainless steel** components, it represents a reliable and durable solution for heating workshops, industries, and construction contexts. The system integrates a precision thermostat for temperature monitoring and a **post-ventilation** function, which is essential for dissipating residual heat and preserving the integrity of internal components after use.

Technical features

- Dimensions: 46.5 x 57 x 86 cm
- Heating elements: in stainless steel
- Triple heating level
- Ventilation function
- Temperature control and protection via thermostat
- Handling: equipped with handle and wheels
- Intended use: ideal for professional use
- Integrated post-ventilation phase
- Structure: fully metal casing
- Water protection rating: IPX4
- Power supply: 380-400V 3Ph-50Hz
- Heating power: 15000 / 30000 W
- Maximum coverage area: 400 m²
- Air output: 1900 m³/h
- Weight: approx. 32.5 kg
