

Industrial mobile heating h932_04

Professional 3000W stainless steel electric hot air generator, compact and adjustable, ideal for workshops and construction sites up to 40 m².

The **electric hot air generator** is a robust and versatile solution designed for professional heating in working environments such as mechanical workshops and industrial or construction sites. Thanks to the combination of **stainless steel heating elements** and an integrated ventilation system, the appliance ensures a fast and constant distribution of heat in volumes up to 40 m², effectively solving thermoregulation needs in poorly insulated environments.

Technical features

- **Dimensions:** 31.5 x 33 x 40 cm
- **Heating power:** 1000/3000 W (dual level selectable)
- **Power supply:** 220-240V 1Ph-50Hz
- **Heating elements material:** Stainless steel
- **Air flow:** 360 m³/h
- **Covered area:** 40 m²
- **Functions:** Two-level heating and ventilation only
- **Safety:** Integrated thermostat with overheat protection
- **Ergonomics:** Adjustable handle for hot air flow orientation
- **Applications:** Construction sector, workshops, industrial environments
