

Industrial spill pallet h977_05

Industrial spill pallet in virgin polyethylene (120x80x40 cm). Capacity 200L, stackable and easy to handle, ideal for acids, oils, and solvents.

The **industrial spill pallet h977_05** represents a professional solution designed for **environmental safety** and the active prevention of accidental spills. Specifically designed for the **storage of medium-small containers**, this unit is essential for managing chemicals, oils, acids, and solvents in production and logistics contexts.

The structure is manufactured in **100% UV-stabilized virgin polyethylene** using a monobloc rotational molding process. This construction technology gives the product **superior chemical resistance** and structural robustness without weld points, ensuring no leaks over time even in case of prolonged exposure to atmospheric agents or aggressive substances.

Technical features

- **Material:** 100% UV-stabilized virgin polyethylene
- **Containment capacity:** 200 liters
- **Dimensions:** L 120 × D 80 × H 40 cm
- **Tare weight:** 25 kg
- **Maximum load:** 200 kg (uniformly distributed)
- **Color:** Blue
- **Handling:** Designed for pallet truck or forklift (strictly while empty)
- **Logistics:** Stackable structure up to 4-5 units for space optimization
- **Chemical resistance:** Excellent against acids, bases, oils, and hydrocarbons
