

Inflatable emergency stretcher h648_10

Inflatable first aid stretcher. Length: 200 cm, width: 88 cm. Material: PVC.

Inflatable stretcher for transporting the injured, ideal for performing rescue operations even in hard-to-reach locations, whether by land, water, or air. Capable of providing **safe transport** of the patient even in the case of spinal injuries or fractures. Inflation is carried out via a specific pump supplied, through which the intake air causes the compressed plastic beads within the structure to create an excellent support base for the injured person. Made of **insulating PVC, cold-resistant and easy to disinfect**. Can also be used for **X-rays and MRI scans**. Complete with **safety straps and transport straps** to ensure maximum safety and practicality. Supplied complete with **transport bag**.

Technical features:

- Length: 200 cm
