

Ironing board toy for nursery school h681_63

Ironing board toy for nursery school h681_63 in solid turned beech wood with natural finish and non-toxic transparent varnishes. Dimensions: 90 x 26 x 57 H cm.

The **ironing board toy for nursery school h681_63** is a professional didactic and imitation aid with high structural stability, developed specifically for **school managers, employers of educational institutions, interior designers, educators, and workplace safety managers in the school or early childhood sector**. This complement responds to the organizational need to set up corners dedicated to symbolic play and the simulation of daily life, solving the operational problem of **providing children with a tool for analog and social activities that is stable and safe, eliminating the risk of injury thanks to rounded edges in accordance with the law and surface treatments completely free of harmful substances**. From a construction standpoint, the entire structure is made of precious turned solid beech wood with different sections and thicknesses depending on the structural components, guaranteeing excellent mechanical resistance to continuous stress and dynamic loads typical of high-traffic school environments. The surface finish includes a natural polishing carried out with non-toxic transparent varnishes that leave the wood grain visible while protecting it from dirt and abrasion. With fixed dimensions of 90x26 cm and a height of 57 cm, the furniture ensures a perfect ergonomic approach for early childhood children.

Technical features

- **Product type:** symbolic wooden ironing board toy for nursery and preschool
- **Code reference:** h681_63
- **Overall length:** 90 cm
- **Overall width:** 26 cm
- **Overall height:** 57 H cm
- **Main structure material:** solid turned beech wood
- **Component construction criteria:** differentiated sections and thicknesses according to the specific mechanical needs of the components
- **Safety perimeter specifications:** all edges and corners are rounded in compliance with current safety regulations (anti-trauma)
- **Finishing and protection cycle:** natural polishing carried out through the application of special non-toxic transparent varnishes
- **Assembly and joining technology:** stable unions obtained by means of joints with wooden dowels (structural pins) and cold-applied vinyl glue
- **Suitability for use:** designed to withstand intensive loads and continuous wear in daily school contexts
