

Ladder for professional use h858_59

Professional telescopic ladder in anodized aluminum, height 410 cm. 150 kg load capacity, 14 non-slip steps and soft-close system.

This **professional telescopic ladder** is designed for operators who require high-extension equipment with minimal logistical footprint. Made of **anodized aluminum**, the structure is conceived to withstand intensive use in industrial and craft environments, solving the issues of transport on small vehicles and storage in confined spaces. The assisted closing system via two buttons ensures controlled folding, increasing operational safety during the end-of-work phases.

Technical features

- **Material:** high-resistance anodized aluminum
- **Compliance:** EN 131 safety standards
- **Maximum capacity:** 150 kg
- **Number of steps:** 14
- **Step type:** special non-slip with ribbed surface
- **Maximum extended height:** 410 cm
- **Dimensions in closed configuration:** 94 x 47 x 9 cm
- **Closing system:** automatic slowed folding with two-button activation
