

Life-saving hypothermia blanket h708_23

Life-saving emergency blanket with double insulation for heat maintenance in the head and chest area. Suitable for body sizes from 50 to 90 cm.

Thermal hypothermia blanket, perfect for stabilizing the body temperature of people rescued due to accidents, environmental disasters, shipwrecks. It features a particular shape specifically designed by ambulance personnel to **maximize heat retention in the head and chest area** (body heat loss, and specifically from the head for trauma patients, can be one of the main causes of death). It also features **practical openings** that facilitate access and intervention and is equipped with a **double snug-fitting and insulating layer**, where the silver part maintains the patient's body temperature, while the multilayer cover prevents heat loss.

Technical features:

- For body sizes from 50 to 90 cm
- For hypothermic patients
- Snug-fitting thoracic shape
- Suitable for maintaining heat in the head and chest area
- With double insulation: the silver foil maintains the patient's body temperature, while the multilayer cover prevents heat loss
