

Lighter display stand with slanting shelf h339_77

Transparent plexiglass lighter display stand with slanting shelves. 3-level counter model. Dimensions: W 18 x D 20 x H 40 cm.

The **h339_77 lighter display stand** is a professional support in **transparent plexiglass** designed to optimize the display and sale of small impulse items in tobacconists, bars, and betting shops. Its distinctive feature lies in the **slanting shelves**, which solve the problem of frontal visibility, allowing products to slide towards the user and ensuring that the offer is always in the foreground. With a vertical structure divided into **3 shelves**, this display allows for the rational and orderly organization of lighters, occupying an extremely small base on the counter. Made with a thickness of 3 mm, it combines solid structural resistance with maximum crystal clarity, transforming the point of sale into a modern and functional display space.
