

Medical trolley with laser-cut base h583_33

Trolley with 30 x 30 cm shelf, laser-cut base and PVC basket. Dimensions: W 50 x D 45 x H 100 cm. Weight: 16 kg.

The **H583_33 medical trolley** is designed specifically for use with **laser devices** and small electromedical instruments. Solid, compact and easily transportable, it is ideal for **medical offices, beauty centers, outpatient departments and clinics** where safe, stable and easy-to-move support is required.

The structure consists of an **extruded aluminum column**, resistant and light, which supports a **30 x 30 cm upper shelf** equipped with an **integrated handle**, useful for facilitating the movement and positioning of the trolley.

The trolley includes a **PVC basket**, perfect for holding cables, accessories or small instruments, maintaining order and functionality in the workstation.

The **laser-cut base**, with dimensions of **500 x 450 mm**, guarantees **maximum stability**, while the **4 Ø80 mm wheels** (including **2 with brakes**) offer **smooth movement** and **secure locking** during use, even in busy clinical environments.

With a **total weight of 16 kg**, the trolley is light enough to be easily transported, but also stable enough to support sensitive equipment.

Simplify the use of your laser or electromedical devices with the **H583_33 trolley**. Contact us now to receive a customized quote for your facility.

Technical features:
