

Modular cubic play structure for schools h821_12

Modular plastic play structure (335x67 cm) with 18 perforated panels and 2 tunnels. Ideal for the motor activity of children aged 3 and up.

This **modular play structure** has been designed to stimulate fun and interaction for children in professional childhood settings. Made of high-resistance **plastic material**, the structure allows for the configuration of a versatile play path through the assembly of panels and tunnels, creating a stimulating environment for movement and socialization. The system is specifically designed for installation in outdoor areas that require durable and safe equipment for **children over 3 years of age**.

Technical features

- **Total dimensions:** L. 335 x h. 67 cm
- **Required safety area:** L. 635 x h. 367 cm
- **Age target:** + 3 years
- **Material:** Weather-resistant plastic
- **Included components:** 18 panels with holes and 2 connecting tunnels
- **Configuration:** Modular system assemblable in a cubic shape
