

## Multifunctional hospital chair h634\_39

Multifunctional chair for hospital use. Electric movement of backrest and leg rest. Capacity: 200 kg.

**Chair for hospitals and clinics**, ideal for infusion therapies, chemotherapies, blood sampling, and for dermatology and cosmetic treatments. Consisting of a structure with a **painted steel frame** and a surface divided into three sections: backrest, seat, and legs. The **upholstery of the surface is made of a special high-thickness bi-elastic eco-leather fabric**, seamless, without gaps and/or accumulation points, thus allowing a drastic reduction in compression on the skin, and ensuring excellent preventive and curative activity for pressure sores. The chair is also equipped with **electric operation via 2 motors**, which allow independent and simultaneous adjustment of the backrest and leg sections; it is also possible to adjust the leg rest by 90° relative to the seat. The armrests move simultaneously with the backrest and are swivel, height-adjustable, removable, foldable, tiltable up/down, and horizontally sliding. Movement management is carried out using a **10-button handset supplied as standard**.

### Technical features:

- Dimensions: W.88.9 x D.172.3 x h.134.7 cm
- Capacity: 200 kg
- Painted steel frame in white color
- High-thickness bi-elastic fabric upholstery, seamless, without gaps and/or accumulation points, fire-retardant class 11M
