

Oil spill kit 31 lt h1043_42

Water-repellent emergency response kit for oils and petroleum derivatives (even in water) with a minimum absorbency of 149 liters. 120 lt UN-approved watertight container with galvanized clamp ring, mm Ø 496x800h.

The **oil spill kit 31 lt** (model h1043_42) is a heavy-duty industrial environmental safety and emergency response system, specifically designed for the rapid containment and remediation of massive hydrocarbon spills. Developed for **large workshops, industrial complexes, commercial ports, shipyards, fuel depots, refineries, and logistics platforms**, this equipment is aimed at health and safety managers (RSPP) and environmental protection technicians who must operate in full compliance with strict current ecological regulations. The system solves the operational problem of **timely containment of large volumes of waste oils, fuels, and petroleum derivatives spread on the ground or floating on water surfaces**; thanks to the selective and water-repellent properties of the internal materials, the kit absorbs hydrocarbons while completely repelling water. The extensive equipment is stored inside a large 120-liter cylindrical polyethylene watertight drum, equipped with anti-UV protection and a hermetic safety closure with an anti-corrosion galvanized metal clamp ring, compliant with strict international approvals for the transport of dangerous goods.

Technical features

- **Kit type and application:** Mod. FOR OIL AND PETROLEUM DERIVATIVES ABSORPTION (effective even in the presence of water thanks to water-repellent properties)
- **Certified total absorption capacity:** 149 liters (LT. 149)
- **Geometric dimensions of the storage drum (ØxH):** 49.6 x 80 cm (mm 496 x 800)
- **Nominal volume of the storage drum:** 120 liters
- **Outer container material:** high-density polyethylene with ANTI-UV treatment (resistant to solar rays)
- **Structural closure system:** watertight lid with anti-corrosion galvanized metal perimeter clamp ring
- **Approvals and transport compliance:** certified according to UN, ADR, RID international standards
- **Total weight of the ready-to-use kit:** approx. 12 kg

Detailed content of the absorbent kit and protective equipment

- **100 Special oil absorbent pads:** dimensions 41 x 46 cm each (suitable for extensive surface spills and finishing cleanups)
- **2 Absorbent socks (long barriers):** dimensions Ø 13 x 300 cm each (designed to surround large areas and block the expansion of flows)
- **1 Pair of protective gloves:** for safe handling of chemicals and exhausted absorbents
- **1 Pair of protective goggles:** eye protection device against harmful splashes and vapors
- **1 KIT PROTECT:** additional supply of accessories for personal safety and management of remediation operations
