

One-seated swing with climbing frame h17204

Northern pine wood children swing with one seat. Equipped with two rope climbing frame and wooden ladder.

This two-seated swing is entirely made of **northern pine wood**.

This kind of wood was chosen because of its high capacity to **withstand** weight pressure and atmospheric elements. This wood, in fact, unlike the one that grows at lower latitudes, it's highly **durable** and suited to outdoors constructions. Plus, this wood has been strengthened by **high pressure impregnation in autoclave**, a process that protects the material, increasing its stability and delaying its natural deterioration.

The swing is equipped with **two climbing frames**: a **rope** one and a large **wooden ladder**.

The structure is supported by four round pillars and one horizontal beam, all welded together via **hot-dip galvanized steel** bolts and brackets. Zinc-coating process sharpens metal natural qualities, adding others, such as rust-proof and resistance to shock and abrasion.

Just **alike** is the realization process of the chain that holds the two seats. The galvanizing process made it even **smoother**, in order to avoid any risk of scratching. The chain links are narrow enough to prevent your child's fingers to get **stuck**.

Available seats flat or wooden crate and rubber.

Specifications:

- Height: 270 cm
- Width: 340 cm
- Depth: 250 cm
- Total size: 350x470 cm
- Diameter poles: 12 cm
- Northern pine timber autoclave
- Galvanized steel
- Wooden ladder and rope

INFORMATION

- **swing material** wood
- **swing type** single
- **Altezza in millimetri** 3000.0000
- **Larghezza in millimetri** 5000.0000
