

Outdoor gas cylinder cabinet h1043_43

Outdoor cabinet for 2 gas cylinders in hot-dip galvanized steel, 600x400x2000h mm. Robust monobloc with ramp, overhanging roof and padlock closure.

The **outdoor gas cylinder cabinet** (model h1043_43) is a professional monobloc structure designed specifically for the safe and compliant storage of compressed gas containers in open environments. Developed for **industrial companies, workshops, laboratories, commercial users and technical departments**, this system is aimed at safety managers (RSPP) who need to comply with current regulations regarding the storage of hazardous substances. The cabinet solves the operational problem of **protecting pressure vessels from both weather and unauthorized access**, while preventing the danger of saturation thanks to continuous natural ventilation that does not allow the stagnation of gas waste. Built entirely of structural steel subjected to hot-dip galvanizing treatment, the cabinet features an extremely robust load-bearing frame prepared for anchored floor fixing and comes complete with a folding metal ramp designed to facilitate the loading and handling of heavy drums.

Technical features

- **Structural configuration:** monobloc structure for outdoor storage
- **Nominal load capacity:** housing for a maximum of 2 cylinders of 50 liters (2 CYLINDERS 50 LT. MAX)
- **External overall dimensions (LxPxH):** 600 x 400 x 2000 mm
- **Number of front doors:** 1 hinged door
- **Construction material:** made entirely of hot-dip galvanized steel
- **Frame properties:** high-strength and robust load-bearing frame
- **Environmental protection:** overhanging roof for rainwater runoff and protection from atmospheric agents
- **Anti-intrusion security system:** sealable and padlockable anti-tamper closure
- **Explosive atmosphere risk prevention:** ventilated configuration that does not allow the stagnation of gas waste
- **Security fixing:** structure suitable for stable floor anchoring
- **Standard equipment included:** complete with ramp to facilitate storage and introduction of cylinders
