

## Oxygen cylinder transport trolley with safety belt h695\_03

Stainless steel oxygen cylinder trolley, 5 conductive wheels, compatible with 10-11L cylinders, max load 25kg, safety belt fastening.

The oxygen cylinder trolley is a medical device designed to facilitate the safe transport of gas cylinders in clinical, hospital, and home environments. It allows for easy movement by reducing manual effort and ensuring stability during transport.

The structure is made of **brushed stainless steel**, ensuring robustness, hygiene, and resistance to corrosion in medical environments. The trolley ensures the **secure fastening of the cylinder via a safety belt**, preventing unwanted movement during transport.

## Technical features

- Material: stainless steel
- Finish: brushed
- Compatibility: 10–11 liter oxygen cylinders
- Maximum load: 25 kg
- Fastening system: safety belt
- Wheels: 5 units, 50 mm diameter (2 lockable)
- Electrically conductive wheels
- Height: approx. 960 mm
- Base diameter: 640 mm
- Self-weight: approx. 5 kg
