

Aluminum post with belt and magnetic base h16207

Lane delimitation post with magnetic base. 2.3 m belt. Product available in various finishes.

Boundary columns ideal for placement at the entrances of theaters, cinemas, museums; to delimit waiting areas or in front of security checkpoints.

The tube is made of **continuous aluminum**, without notches to ensure superior strength and reliability. The belt rewinder mechanism is equipped with a self-winding system with slowed return thanks to the integrated brake. The **safety end attachment** of the belt consists of unbreakable plastic material. With the belt rewinder mechanism housed inside the post, the belt is protected from dirt, dust, and wear.

The **post is 4-way**: one outgoing belt and three incoming ports. **Up to 3 belts can thus be added to the same post.**

The **magnetic base** with high stability connects to the stainless steel plate (1.5 mm/2.0 mm).

The provided **stainless steel plate** can be floor-mounted with a special double-sided adhesive sheet or with a central screw. The magnetic post can be easily assembled or disassembled without additional setup and without damaging the floor. The small diameter of the magnetic base allows for a wide passage, keeping the distance between the posts unchanged. With proper alignment of the base plate, once set up, the queue line always remains the same.

Technical features:

- belt length: **2.3 m**
- belt width: **5 cm**
