

## Parallel bars for physiotherapy with steel handrails h581\_39

Rehabilitation parallel bars including steel handrails, walkway and access ramps. Length: 3 m.

Practical and reliable **ramp for performing rehabilitation activities** and physiotherapy exercises, ideal for rehabilitation centers or for setting up gyms inside nursing homes and care facilities. Composed of a resistant and solid **painted steel structure**, **painted metal handrails** and a **walkway** covered in **non-slip material**, including **access ramps**. The patient can, thus, hold onto the parallel bars while shifting weight back and forth and left and right, with the aim of improving balance and walking. The **length** of the ramp is **3 m**. The **handrails** are **adjustable in width and height** via a **telescopic system** that ensures safety during use.

### Technical features:

- Base length: 3 m
- Base width: 70 cm
- Painted steel structure
- Anatomically shaped painted metal handrails, height and width adjustable via telescopic system
- Handrail length: 3 m
- Handrail height adjustment: 65 - 100 cm
- Handrail width adjustment: 40 - 80 cm
- Single handrail capacity: 135 kg
- Wooden walkway covered with non-slip material
- Walkway width: 59 cm
- Access ramps
- Declaration of conformity
