

Parking barrier for garage h729_28

Parking barrier in galvanized steel with anti-rust treatment, padlock closure, reflective strips, bases up to 10 tons.

The parking barrier is a robust and durable solution for access control in **garages, private parking lots and condominium courtyards**. Made of **galvanized steel with anti-rust treatment**, it guarantees resistance over time even in exposed environments. The structure is equipped with **high-resistance bases up to 10 tons**, designed for direct fixing to the floor, and includes a **padlock closure** to control access. The **red reflective strips** ensure optimal visibility even in low light conditions, improving the safety of drivers and pedestrians.
