

Parking barrier h729_25

Galvanized steel parking bollard with round base. 85x23x60 cm, European lock, ground fixing included.

The parking bollard is an effective solution for regulating access to private parking lots in apartment buildings and garages, ensuring control over the space intended for authorized parking. The robust structure in **galvanized steel** offers resistance to atmospheric agents and daily mechanical stress, while the **round base in steel and polyamide** ensures stability and durability over time.

The **European lock**, positioned at the top of the bollard, allows for agile and intuitive opening and closing operations. Every assembly operation is simplified by the provision of **a single fixing point** to the ground, with screws and anchors already included in the delivery.

Technical features

- **Dimensions:** L.85 × W.23 × H.60 cm
- **Material:** galvanized steel and polyamide
- **Closing system:** European lock with double key
- **Fixing:** single ground attachment point; screws and anchors included
