

Parking barrier hoop with reflective strips h972_66

Parking barrier bollard in galvanized steel with 50 mm hoop, Class 1 reflective strips, dimensions 95.5×47.5×45.5 cm, weight 7 kg, equipped with 2 keys and 9 fastening elements.

The **H972_66 parking barrier bollard** is a protection and signaling device designed to prevent unauthorized parking in private, company, condominium, and public areas. The **galvanized steel** hoop structure effectively resists corrosion and impacts, ensuring reliability even in conditions of prolonged outdoor exposure. The **large Class 1 reflective strips** increase visibility in low light conditions, improving road and pedestrian safety. The neutral gray color integrates discreetly into any urban or business context.

Complete with **2 security keys** and **9 fastening elements**, the product allows for easy installation on any flat surface and ensures a stable hold thanks to the robust anchoring base.
