

Parking barrier in sheet metal h729_42

Galvanized steel parking barrier Ø 50 mm, with sheet metal bases and handle-key closure. Solid protection for private, condominium, and corporate parking spaces.

The **H729_42 parking barrier** is a structural solution for reserving and protecting parking spaces in private, condominium, and corporate contexts. Designed with corrosion-resistant materials, it ensures durability in outdoor environments and provides control over vehicle access through a practical and reliable locking system.

The barrier solves the need to protect assigned parking spaces by blocking access to unauthorized vehicles, while maintaining ease of daily use and customizable installation based on the type of flooring.

Technical features

- **Tubular structure:** galvanized steel Ø 50 mm, 2 mm thickness
- **Bases:** sheet metal
- **Finish:** rustproof galvanizing
- **Closure:** handle with key
- **Floor fixing:** not included (allows customized choice of anchoring)
