

Parking barrier with European cylinder lock h32802

Electro-galvanized steel parking barrier with automatic locking and European cylinder. Dim. 940×130×460 mm. TÜV certified.

Parking system with **electro-galvanized steel tube** structure designed to protect parking spaces in private areas. The device is equipped with an **automatic lock upon manual return to the vertical position**, which allows the barrier to be kept in the rest position without continuous interventions. The **protection cap on the fixing foot** is made of **glass-fiber reinforced polyamide**, ensuring impact resistance and durability over time. The **locking system via European profile cylinder** offers differentiated access control thanks to different keys, ideal for limited transit areas.

Technical features

- **Structural material:** steel tubes
- **Anti-corrosion treatment:** electro-galvanization
- **Safety lock:** automatic upon manual return to the vertical position
- **Locking system:** European profile cylinder with different keys
- **Dimensions:** L. 940 × D. 130 × h. 460 mm
- **Certification:** TÜV

Mounting variants

- Fixing with screws + nylon plugs
- Fixing with brackets + break-off nuts
