

Parking bollard h32807

Galvanized steel parking protection barrier with cast iron foot, automatic locking and European profile cylinder lock. For private areas and apartment buildings.

Parking protection barrier designed for the delimitation and access control in **private areas, condominium courtyards and areas closed to traffic**. Made with a robust steel tube structure and anti-corrosion treated cast iron fixing foot, it guarantees stability and durability over time. The device is equipped with an **automatic lock with manual return** that allows the barrier to be kept in a vertical position when not in use, and a locking system via a **European profile cylinder** equipped with three keys for access control.

Technical features

- Construction structure: steel tubes
- Tube dimensions: round diam. 50 mm / internal square 50×50 mm / external square 55×55 mm
- Tube thickness: 2 mm
- Fixing foot: cast iron with anti-corrosion treatment
- Hot-dip galvanizing for anti-corrosion protection
- Locking system: European profile cylinder with 3 keys
- Locking mechanism: automatic upon manual return to vertical position
- Fixing: screws, wall plugs and washers included
- Overall dimensions: 870 mm (960 mm with extension) × 380.6 mm × h. 450 mm
- Weight: 11 kg
