

Parking post h32810

Electro-galvanized steel parking column, 900 mm, automatic locking, vertical block, TÜV certified, for private and residential areas.

Parking protection column designed for **private areas closed to public transit and residential environments**. Made of **electro-galvanized steel tubes**, it guarantees long-lasting protection against corrosion in any climate context. The protection cap on the fixing foot in glass-fiber reinforced polyamide preserves structural integrity and offers additional electrical insulation.

Equipped with **automatic locking upon manual return to the vertical position**, it allows intuitive and safe use. The possibility of locking even in the lowered position adds operational versatility, adapting to different usage scenarios: free parking with the column upright or a delimited area with the column locked on the ground.

Technical features

- Material: steel tubes
- Anti-corrosion treatment: electro-galvanization
- Locking system: European profile cylinder
- Automatic lock upon return to vertical position
- Locking possible even in lowered position
- Fixing: galvanized screws and nylon plugs
- Height: 900 mm
- TÜV certification
- Protection cap: glass-fiber reinforced polyamide

Options

- Fixing via brackets and shear nuts (on request and quote)
