

Patient transfer sheet h664_01

Rollbord for patient mobilization in polyethylene with sliding fabric. Max load: 350 kg. Dimensions: 180 x 50 cm.

The transfer board for disabled people is a fundamental product for those healthcare sectors dealing with patients with **motor difficulties** or **serious pathologies** that prevent independent walking. The transfer board is made of **polyethylene with silver-coated sliding fabric**. The product features an **extremely resistant structure** that can support up to **350 kg**, making it ideal for obese patients. The sheet has no magnetic parts, screws, or plastic parts, so as not to create impediments to the mobilization of patients. Finally, the product is equipped with an **antibacterial coating** that can be cleaned with all common disinfectants.

Technical features:

- Material: polyethylene
- Silver-coated sliding fabric
- Radiolucent
- Max load: 350 kg
- Antibacterial coating
- Dimensions: 180 x 50 cm
- Foldable

The patient transfer sheet is also available on the MEPA portal. Discover how to find our company on the [Public Administration portal](#).
