

Patient transfer sheet h8936

H8936 patient transfer sheet in low-friction technical fabric, 150x100 cm. 250 kg capacity, ideal for assisted repositioning in pairs.

The **H8936 patient transfer sheet** is a professional aid designed for the controlled movement of bedridden subjects. Its primary function is to **minimize friction** between the patient's body and the support surface, facilitating cranio-caudal repositioning operations or lateral transfer between bed and stretcher. It is an essential solution for clinical and care contexts where the prevention of workplace injuries for operators and the safety of the patient are priorities.

Technical features

- **Dimensions:** 150 x 100 cm
- **Load capacity:** Up to 250 kg (compatible with bariatric patients)
- **Material:** High-slip technical fabric with low friction coefficient
- **Operational configuration:** Designed for exclusive use in pairs
- **Main applications:** Horizontal transfer and postural repositioning
- **Maintenance:** Washable material and compatible with hospital sanitization protocols
