

Pedestrian barrier h140_553

Steel pedestrian barrier with T-profiles (80x100 cm). Features provision for advertising panels for safety and urban communication.

The **pedestrian barrier H140_553** is an urban furniture element designed for the delimitation and safety of pedestrian paths, squares, and public areas. The structure stands out for the integration of a section dedicated to **visual communication**: below the handrail, there is provision for a compact polycarbonate panel, ideal for advertising posters, institutional logos, or informational signage.

Built with **T-shaped steel profiles**, the barrier ensures high mechanical resistance and long-term durability, even in high-traffic urban contexts. The standard finish in **pure white RAL 9010** ensures a clean aesthetic impact and easy identification of the module by pedestrians and drivers.

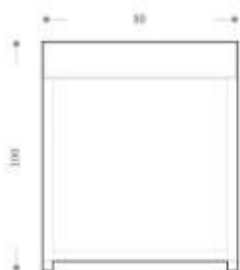

Technical features

- **Dimensions:** L 800 x D 80 x H 1000 mm
- **Weight:** 29 kg
- **Material:** Steel with "T" structural profiles
- **Panel support:** Provision for white compact polycarbonate
- **Fixing system:** Direct embedding in the ground
- **Finish:** RAL 9010 polyester powder coating
- **Supply:** Assembly kit including screws and technical manual
