

Pedestrian walkway with 4 ramps h972_101

HDPE and steel construction pedestrian walkway, 140x320 cm. 4 integrated ramps for multidirectional access and 1000 kg capacity. Guaranteed safety.

The **h972_101 construction pedestrian walkway** is an advanced technical solution to ensure the safe crossing of excavations and temporary obstacles. Designed for high-intensity construction, industrial, and infrastructural contexts, it solves critical issues related to the mobility of personnel and light equipment in dynamic environments. The structure combines the strength of **high-density polyethylene (HDPE)** with the support of a **secondary steel structure**, offering an optimal balance between mechanical stability and durability.

Technical specifications

- **Main material:** HDPE (high-density polyethylene)
- **Secondary material:** Reinforcement steel
- **Color:** High-visibility yellow/orange
- **External dimensions:** 140 (L) x 320 (W) x 100 (H) cm
- **Clear passage width:** 2940 mm
- **Access system:** 4 integrated ramps (one on each side)
- **Protection:** Fixed guardrails with a height of 1000 mm
- **Load capacity:** Maximum load 1000 kg
- **Operating weight:** 85.05 kg
- **Walking surface:** High-performance non-slip finish
