

## Pediatric examination couch h666\_01

Metal infant examination couch with fireproof padded top, drawer, and bottom shelf. Height 85 cm, load capacity 80 kg. For pediatric clinics and neonatal wards.

The examination couch is specifically designed for the clinical examination of newborns and infants in a medical environment. It guarantees maximum comfort for the small patient during the medical visit and facilitates physician access for diagnostic procedures. The stable structure allows working in complete safety in pediatric, obstetric, and neonatal ward contexts.

## Technical specifications
